The Marine Institute uses the Kelsius system for reliable, effective temperature monitoring

The Marine Institute in Galway operates laboratories that require environmental and temperature-controlled equipment to ensure the integrity of samples, reagents, reference materials, and analytical processes.

What Kelsius delivers

The Kelsius system provides the Marine Institute with real-time monitoring and automated alerts, enabling rapid response to temperature excursions and reducing the risk of sample loss or compromised analytical results.

The team at the Marine Institute finds the web-based platform user-friendly, allowing authorised personnel to access monitoring data and historical records easily, supporting both operational oversight and audit requirements.

What they say...

"From a quality management perspective, the Kelsius system runs reliably in the background, providing confidence that critical temperature-controlled equipment remains under constant surveillance."

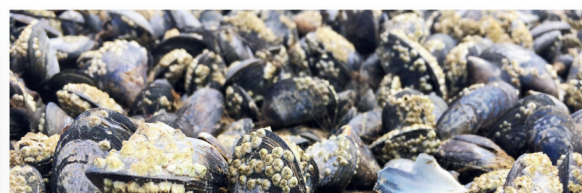

"We have found the Kelsius team to be professional, responsive, and supportive throughout installation, validation, training, and ongoing system maintenance. Any technical queries or service requests have been addressed promptly and effectively."

Yvonne Bogan, Quality Manager
The Marine Institute

Enhanced Compliance

For quality management, Kelsius helps the Marine Institute to meet accreditation requirements by providing:

- ✓ secure data logging.
- ✓ traceable records.
- ✓ comprehensive reporting capabilities.
- ✓ enhanced compliance with quality standards.
- ✓ the ability to streamline evidence-gathering during audits.

"...it's an excellent, reliable and effective system for continuous temperature monitoring across our laboratory facilities."
